

TAPING SERVICE

VOUN Company as part of OR64 provides taping service on own high speed taping machines according to the customer specification. Our company VOUN is equipped with five vertical double-head taping machines to apply 1 or 2 layers of tape in one step.

The most common material to apply is Mica Tape, but could be used also other materials from the offer of company OR64.

HOW TO PROCEED:

- Customer will provide solid/stranded copper conductor
- VOUN company will apply material in construction according to the customer's specification and keeping a control to ensure required parameters are fulfilled.

CONDUCTORS DIMENSIONS RANGE:

Type of Conductor	Diameter	Cross-Section
Solid Conductor	0,80 - 2,25 mm	0,50 - 4 mm ²
Stranded Conductor		0,50 - 16 mm ²

** Other dimensions on request*

CONDITIONS OF COPPER CONDUCTORS DELIVERY:

- Conductors are delivered on metal or plastic bobbins
- Each delivery has to contain enough empty bobbins to cover requested length of taped conductor
- Delivered bobbins have to be clean and in good condition, without corrosion and deformation
- Bobbins with conductors are delivered in metal containers or vertically fixed on wooden pallets

Maximum Bobbine Size:

STANDARD - DIN630

MAX. - DIN800

** Other dimensions on request*

Maximum Weight:

Bobbin with copper: max. 1 Ton

Palette: max. 2 Tones
